

## CryoNeurons™ Cryopreserved Human Hippocampal Neurons

**Now Available!**

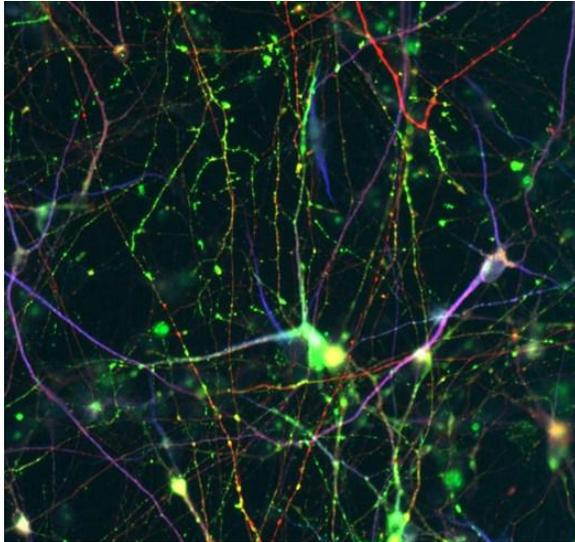

Figure 1: MAP2 (Blue), Tau (Red) Synaptophysin (Green)

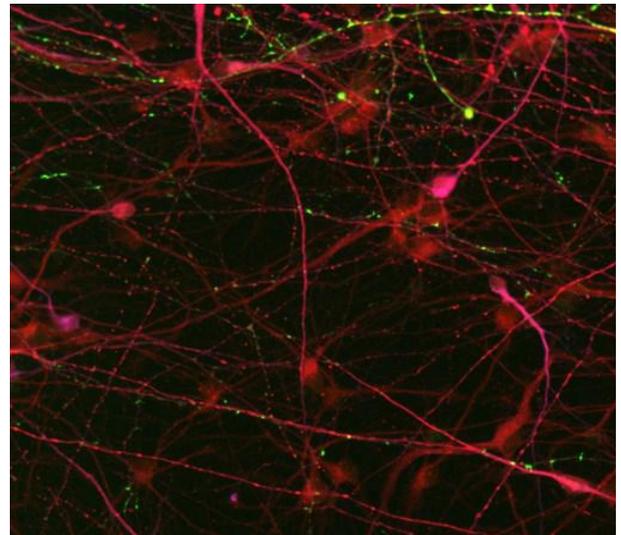

Figure 2: VGAT (Green), VGlut1 (Red), Tuj1 (Blue)

- Human Hippocampal cultures with a mixed population of neurons, astrocytes, and oligodendrocytes display very mature neuronal phenotypes with excitatory and inhibitory neurons.
- Available as validated neural cultures with 5 million viable cells per vial. Custom sizing is also available.
- Custom lots available for High-Throughput Screening.
